

## Company description

qaelum NV (i.f.) is a young high-tech spin-off company of the University Hospitals of Leuven. Based upon more than 15 years of quality assurance experience in an academic environment as well as in the field, we are the preferred partner when it comes to medical imaging quality control.

Passionate about solving real world problems, we focus on the development and deployment of highly innovative solutions to overcome the everyday problems of every medical imaging professional. Ranging from automated quality control in nationwide breast screening programs to optimized solutions for local patient dose monitoring, we have solutions for all problems, no matter what scale they have.

## Vacancy description

To extent our portfolio of quality control solutions for X-Ray devices, we are looking for 2 informatics professionals for immediate hiring. You have a Master or Bachelor degree in Informatics and will be responsible for the further improvement of our quality control related solutions. This includes the development, installation and end-user support of our different tools. You have excellent JAVA development skills, both on the desktop and in server applications. Knowledge of medical imaging informatics, medical physics, image processing or additional programming languages is a plus. You are a self organized teamplayer with outstanding social skills who is eager to work in the early stages of an internationally oriented spin-off company. Being fluent in English is a must, knowledge of additional languages a plus. Candidates should be willing to travel abroad if needed.

We offer a competitive salary and a number of extra legal advantages, tailored to the candidate, together with flexible working hours and the possibility to work from home. We truly believe in lifelong learning and give our employees all possibilities for the continuous building of their skills and knowledge. Candidates will be able to prove their potential in an exciting and engaging international atmosphere, working on the future of medical imaging quality control.
